**HERE'S WHERE
IT GOES —**

WOODWORK

An English Entrance—Curtis C-1787. The door is Curtis C-1089. Leaded glass windows are Curtis Silentite Casements.

Wise Builders BUY WOODWORK WITH THESE POINTS IN MIND

GOOD DESIGN Well designed woodwork helps to keep a home modern for many years—helps it to retain value throughout its life.

Much of the Curtis Woodwork line has been designed by prominent architects. Trowbridge and Ackerman, Frederick L. Ackerman, Russell F. Whitehead, Dwight James Baum and others—those are some of the well-known architects who have helped Curtis design and detail their line of Architectural Woodwork. So you may select Curtis Woodwork with the security that it will fit in perfect harmony with the architectural style of your new home.

GOOD MATERIALS Only choice materials are used in Curtis Woodwork—all selected under rigid Curtis specifications. All wood is carefully inspected, kiln-dried, graded, stored and handled.

GOOD CONSTRUCTION Curtis Woodwork is made by experienced craftsmen. Most of them have long records of service with Curtis. An enviable

company spirit helps each individual take pride in producing only the best. For they know that in someone's home their craftsmanship will give lasting pleasure and enduring value.

The modern Curtis plants are equipped with efficient machinery, much of it patented. Curtis engineers have designed and built most of it. The Curtis Research Department continuously studies and improves construction features and production methods.

EASE OF INSTALLATION The minimum of labor is required to install Curtis Woodwork. As much of the assembly work as possible is done at the factory. Lower painting cost results from the smooth surfaces obtained through precise machining.

REPUTATION OF MAKER When you see the Curtis trade-mark on your woodwork, you have assurance of lasting, satisfactory performance. And this trade-mark helps to provide enduring woodwork value for your home.

ENTRANCES

"WELCOME to this home"

—say these entrances

● Curtis Entrances answer these questions for you—"How can I make my home look more friendly?"—"How can I give it a distinctive architectural style?"

It pays to select an entrance that will never go out of date. All Curtis entrances are modern adaptations of traditional architectural styles which have been in good taste for hundreds of years.

If a home has individuality, it invariably finds expression in its doorway. Often just an ordinary house is made into a livable, lovable home by a doorway, with character of its own, thus endowing the home with that which was lacking. The doorway catches the eye first. If it is appealing, one sort of likes the whole house.

Because the doorway is a means of entrance, it is observed and used constantly, and is one of the most important parts of the home. That is why it should be attractive and inviting.

For a new home or for an existing one, your Curtis dealer can show you a full selection of beautiful entrances to suit any pocketbook. Instruct your architect and builder to select your doorway from the Curtis line.

•4•

Designed by Dwight James Baum, F.A.I.A.—this distinctive, classical entrance is Curtis C-1728. Door is C-1023.

Here lasting beauty makes enduring value. It's Curtis Regency Entrance C-1725. Door is C-1027.

This Colonial Curtis Entrance (C-1722) is adapted from an early Connecticut River Valley original. Door is C-1021.

A charming English Regency design for the home of Colonial character. Curtis Entrance C-1697, Door C-1020.

HERE'S HOW TO STAMP YOUR HOME WITH A FRIENDLY SMILE THAT NEVER FADES

• Haven't you seen homes so charming, so cordial in appearance, that they seem to welcome you with a hearty handshake?

A Curtis Entrance will do just that for your home. For well-designed, attractive entrances catch the eye—do more than any other feature to make you say "What a lovely home!"

Curtis Entrances are modern works of art in wood with a traditional background of good taste. They fit any style of architecture and are highly recommended by leading architects.

Early Connecticut style—a Curtis Colonial entrance, C-1716, Door C-1030.

English entrance, C-1787, Door C-1089. Very true to type.

Simple, inexpensive Colonial entrance, C-1710, Door C-1020.

JUST THE ENTRANCE YOU WANT—TO FIT YOUR POCKETBOOK

• Curtis entrances are modestly priced. Whatever the size or price range of the home you plan to build or remodel, there is a Curtis Entrance and other Curtis woodwork which will fit your pocketbook and give your home lasting beauty and enduring value.

You have a choice of *twenty different entrances* in the Curtis line. All are pictured in your Curtis dealer's catalog.

There's economy for you in the Curtis plan of manufacture which produces architectural woodwork in quantity. Thus you may give your home the best in woodwork design at a surprisingly reasonable cost.

How One Architect Feels about Designing Woodwork for Curtis

"I consider it a great opportunity and a real pleasure to be retained by the Curtis Companies Incorporated to develop some of their new woodwork designs. I am glad to have had this chance to make it possible for people of good taste to have carefully designed architectural features for both the exteriors and interiors of their homes."

"I have endeavored in these designs to cover, not only the best periods of our Early American architecture, but also to add details showing a modern adaptation of these styles and those of English Regency and Classic motive. I hope that the study put into these designs, together with their execution by Curtis, will add beauty and value to American homes."

Dwight James Baum, F.A.I.A.

WINDOWS

Meet America's Original **TROUBLE-FREE WINDOW!**

• Eight years ago an entirely new type of window was pioneered by Curtis. Today that window is America's fastest selling modern window—the Silentite Double-Hung "Insulated" Window.

When your home is equipped with Silentite Windows, you are free from window trouble. There's no sticking, rattling, swelling or shrinking. Silentite shuts out dust and draft. It reduces cleaning bills, too.

And it helps save fuel (owners report as much as 25%) because it's weather-tight. It *always* works, never needs fixing! It's a true economy window, which reduces both installation and maintenance costs.

Mr. and Mrs. America have voiced their approval of this troubleproof wood window. Note these important points of Silentite.

•6•

Wood is Best

Silentite is a wood window—treated with special Curtis dip to give long years of satisfaction. Wood is the best known material for windows and all interior and exterior millwork. Wood has proved itself through centuries of use. Tell your architect and contractor that you want wood windows in your home.

No Old Fashioned WEIGHTS, CORDS OR PULLEYS

Silentite operates on balanced springs that don't get out of order and will last for the life of the house. Silentite windows are easy to install, which means lower finished cost. And they are trouble-free year after year.

● Curtis makes winter windows and screens for Silentite. A complete unit may be ordered at one time, including Miterite trim. Each item is priced separately.

—Silentite winter windows are "pre-fit." They may be hung from the inside—a very important feature.

—Silentite screens are likewise "pre-fit"—and can be hung from the inside.

Order your screens and storm sash when you order your windows. Then there will be no delay and you will have both when you need them. Just tell your Curtis dealer to include Silentite screens and storm sash for your windows.

SILENTITE CONSTRUCTION

Let's get technical and see how Silentite is weather-stripped.

WEATHER-STRIPPING

This is a section through the top of a Silentite window, showing how both elements of the exclusive Silentite weather-stripping are accurately located to assure perfect fit.

SILL WEATHER-STRIPPING

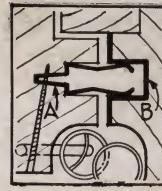

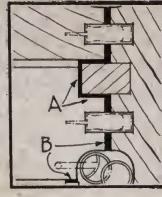

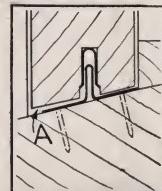

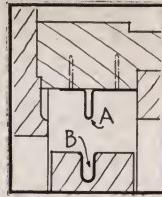

Here's the bottom of the Silentite sash and sill. See how the two weather-strips fit tightly to shut out drafts and dirt. Notice space at (A) for water to drain away quickly.

"PRE-FIT" AT FACTORY

The heavy black line shows you the large amount of clearance between the sash and the frame—ample latitude in case of swelling. This is why Silentite always works easily.

VERTICAL WEATHER-STRIPPING

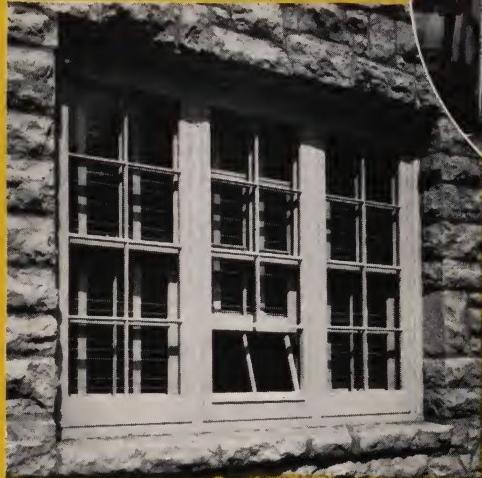

Cross section of Silentite window. Heavy black lines show double contact of weather-stripping which assures extra protection against infiltration of air.

CURTIS Patented Weather-Stripping Makes **SILENTITE** Weather-tight

● You've just inspected Silentite construction with the exclusive weather-stripping that makes Silentite the most weather-tight window made.

Every Silentite window is fully weather-stripped at the factory. It is built-in, not applied as an after-thought. Curtis makes no Silentite units without this weather-stripping. For with modern heating systems, windows must be "insulated" to be efficient.

(Above) No danger of drafts here! There's better health, in every season, in Silentite homes. You'll want at least one of these Curtis Protectorvent winter windows in each room.

Silentite pre-fit winter windows. Center window is equipped with Protectorvent sash which provides healthful no-draft ventilation.

"Insulated..."

Silentite Windows are weather-stripped by the best method known. (Proved by test.) They leak less heat—save on fuel—shut out dust and dirt—eliminate rattling and sticking. The patented weather-stripping is applied at the factory.

EVERY *Silentite* WINDOW
IS TRADE-MARKED FOR YOUR PROTECTION

When you see the name "Curtis Silentite"—you'll know you're buying trouble-free windows. Trade-mark appears on weather-stripping of the frame. Insist on the genuine Silentite—the trouble-free window.

SILENTITE
Pre-Fit

THE "INSULATED" WINDOW

WINDOWS

SILENTITE—the Everlasting Cure for "Window Pains"

● Silentite was the first major window improvement in nearly 300 years! It has simply cured "window pains" by omitting their causes.

You've been reading about Silentite features. But performance counts!

So read of these two cases. See what users think of Silentite's performance under extreme conditions.

From Emporia, Kansas, in March, 1935, came these words: "I do not think we had any more dust in our house after the storm than one would have in a house equipped with ordinary windows on an ordinary day."

This was written after one of the most severe Kansas dust storms in history!

During the Ohio River Flood in January, 1937, a Silentite unit remained *under water* for five days. When it was "rescued" it still worked perfectly!

We've thousands more testimonials as convincing as these. They all add up the same—that Silentite cures "window pains"!

But remember, there is only one Silentite Window. It's made by Curtis. And Curtis has blazed the trail in window making since 1866. Whatever your window needs may be, Silentite will answer them with lasting, trouble-free satisfaction.

FOR ANY EXTERIOR

Whether the exterior walls of your house are brick, stone, frame or stucco, Silentite will fit them. For Silentite adapts itself to any style of architecture, any wall construction. And there are several styles of windows—a choice for every taste.

MITERTITE *Pre-Fit* WINDOW AND DOOR TRIM

Miterlite Trim "frames" windows in good taste and modern distinction. Because it is completely machined, with the greatest accuracy, a single side of Miterlite can be applied in 13 minutes as compared with 55 minutes required for the preparation and application of cut-to-length trim. This reduces installation cost.

Miterlite Trim is a companion product to the Silentite Window. It is modern, beautiful, narrow trim for windows and doors. It fits tightly because it is designed to keep joints together permanently. It is made in several styles and in different woods.

Miterlite Trim eliminates wide, bulky door and window trim. Here its true beauty is shown with Curtis Door C-3020.

Penn Miterlite Trim.

Regency Miterlite Trim.

Note the beauty of this narrow Miterlite window trim.

WOOD FOR LASTING SATISFACTION

● Silentite Casement is made of wood, for wood has proven satisfactory for window construction for hundreds of years. Wood is a non-conductor of heat and cold. It is workable, durable, beautiful. Year after year, wood casements will prove satisfactory, economical of upkeep, weather-tight and fuel-saving. Read air leakage tests on following page. These show the Silentite Casement to be the most weather-tight casement made.

"INSULATED" CASEMENTS

SILENTITE Is Modern, Economical, Weather-tight

● Have you ever seen a Casement Silentite Window work? It's enlightening to see how simple this casement operates!

For the Silentite Casement marks the first achievement of a window manufacturer to omit trouble from casement windows.

Curtis started from scratch to build the Silentite Casement. The troubles found in ordinary casements were avoided by omitting their causes. Many Silentite features are covered by exclusive Curtis patents.

The Silentite Casement is "insulated" too. It's fully weather-stripped. It has new features, new principles of construction and new beauty.

So Curtis gives you the trouble-free Silentite Casement—for those who want the distinguished beauty of Casement Windows in their modern homes. Note the features of this new style casement on the following page.

A wide variety of stock Silentite Casement sash is available so that your architect may carry out any desired combination or any treatment of sash openings. Note the absence of hardware on the outside, which, on other casements, frequently rusts and mars the beauty of the home.

.9.

Silentite operates as easily as dialing a radio. Opens from inside only.

CASEMENTS

FOR LASTING, TROUBLE-FREE CASEMENT SATISFACTION

SILENTITE

● Check these features of the Silentite Casement against those of other Casement windows. Then you'll be sold on the Curtis Silentite!

1. A complete "pre-fit" casement unit, including all operating hardware, screens and insulating glass. Screens and insulating glass are priced separately.
2. Highly efficient Curtis Weather-Stripping which makes the Silentite Casement weather-tight.
3. Fuel savings greater than with ordinary casements. (Reported by home owners everywhere.)
4. Won't stick, bind, warp, swing, slam or rattle.
5. No outside hardware, no inside hardware—just a convenient sash adjuster that's very simple to operate.
6. Draftless ventilation.
7. Easily cleaned from the *inside*.
8. Wood—for lasting satisfaction.

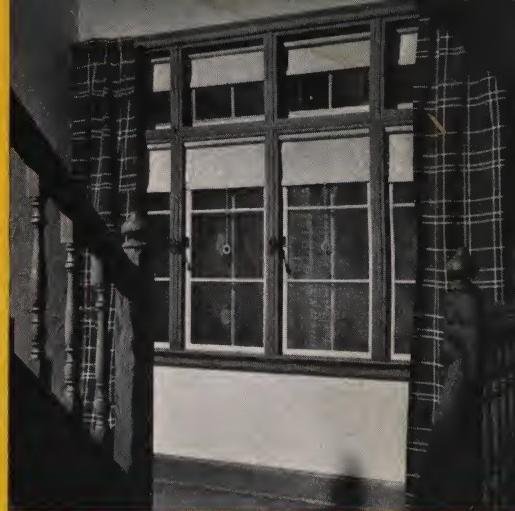

Look under these "test results" of air leakage to see how other casement windows compare with Silentite.

New Curtis "Rotovent" window—a full circle sash that's weather-stripped—that fits any wall. Opens from inside only. Screen and hardware furnished.
Design No. C-1664.

Silentite pre-fit basement unit — weather-stripped — screens and hardware furnished. Opens from inside only. Curtis design No. C-1668.

Silentite Casements with screens in place.

Easy to install screens and winter windows.

Easy to clean from the inside.

TEST AIR LEAKAGE RESULTS

Casement Tested	Cubic Feet of Air Lost per Hour —Total for Entire Unit	Cubic Feet of Air Lost per Hour per Foot of Sash Perimeter
Silentite Weather-striped Casement.....	316.2	15.97
Casement "B" (wood).....	411.0	22.10
Casement "C" (metal).....	727.2	42.8
Casement "D" (metal).....	1128.0	62.88
Av. of Casement C & D with Storm Sash.....	572.4	36.26

These tests were made by Pittsburgh Testing Laboratory, one of the country's foremost material testing agencies.

If you like Casement windows, just say Silentite. Get all the modern Casement distinction and none of the old-fashioned Casement trouble!

"Please
Come In!"

Curtis Colonial Mantel C-6057. Made in pine. Curtis French doors also pictured here.

... Your Room Can Say That!

● Curtis Mantels have refinement, friendliness and enduring value—*built in*. For Curtis Mantels are modern versions of designs that have been symbolizing good taste for centuries.

When you select a mantel for your home, be sure it is architecturally correct. Mantels, like all other properly designed woodwork, give your home a wealth of distinction in everlasting beauty. And they do their part to insure enduring value.

Some of America's most prominent architect-designers planned many of the Curtis Mantels illustrated here.

They have adapted the charm and dignity of English Regency, our own early Colonial and other periods to exacting modern requirements. The very beautiful mantel on the cover of this book is Curtis design C-6072.

Every home should have at least one fireplace, framed by a charming mantel to match the general architectural style of the home. In the Curtis line you will find a variety of authentic designs to satisfy every architectural style and every pocketbook. These are made in different sizes and woods. Your Curtis dealer can give you full information, including prices.

WELL DESIGNED DOORS

As long as a home stands, its doors must give good and faithful service. For, of all the "permanent furniture" in a home, doors are least likely to be

MAKE A WELL FURNISHED ROOM

replaced or remodeled. Generally, once in, they are there for the life of the home.

Curtis doors are architecturally correct. Like other Curtis Woodwork, they are built on the finest quality standards of materials and construction. The many years of woodwork experience that Curtis has had are especially obvious in these fine door designs. They are priced in a range to satisfy every size home.

"BEAUTY MUST BE BUILT-IN— IT CANNOT BE MOVED-IN"

The famous decorator who said, "If beauty is not built into a home, it cannot be moved in," knew the importance of well-designed, well-built interior woodwork.

This thought is carried throughout the entire Curtis Woodwork line. And Curtis Doors in particular give a proper setting to your scheme of decoration. They are fine points of beauty in homes—repay their careful selection by radiating and complimenting the good taste which they represent.

On this page you see several examples of how doors play more than an ordinary part in establishing distinction. Your Curtis dealer will help you select doors suitable for your home, whether you build or modernize. In his Curtis Catalog are doors for every use—in all sizes and woods. Both interior and exterior doors may be selected from the full Curtis line.

... AND PLAY A MAJOR PART IN INTERIOR DECORATION

The choice of the doors for your home is much more than the mere matter of determining the correct size. Because of the importance of doors from both the practical and decorative sides, Curtis offers a very large variety of designs. Colonial, Early American,

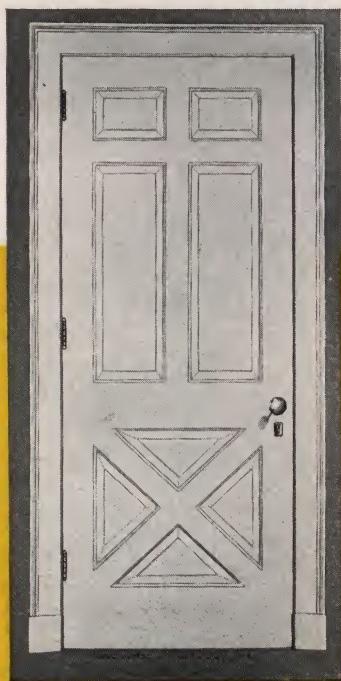

English, Tudor, Modern American, Cape Cod—whatever design your home is now or is to be, you'll find just the right doors in the Curtis line. Tell your architect and builder your doors are to be Curtis. You will be assured of lasting satisfaction in style and service. Leading interior decorators favor Curtis doors because of their excellent design.

MIRROR DOORS— STYLISH, PRACTICAL

One has but to turn to the well-known home and furnishings magazines to realize the importance of mirrors in the home. They are widely used—all sizes and styles.

Mirror doors are both practical and decorative. You'll want at least two—one upstairs and one downstairs.

Curtis mirror doors are produced from any stock panel door by preparing one side to receive the mirror, and applying the necessary moldings.

Curtis door C-3035—a very distinctive design.

Curtis Mirror door C-3110.
Useful in any home.

CABINETS

YOU'LL BE A
PROUD
OWNER . . .

Here's a charming dining room with Curtis China Case C-6520. This case is available in pine with or without glass door.

with this charming cabinet work to grace your home

• Whatever your scale of living, or whatever your frequency of entertaining, these cabinets by Curtis will make you proud each time guests come in. For these cabinets, like all Curtis Woodwork, are built like the finest furniture—to provide lasting beauty and enduring value.

Entertaining at mealtime gives us one of our best chances to exhibit our personal degree of good taste in dining service and in dining room decoration.

In designing these Curtis Cabinets, no pains were spared to provide the finest in value at the most reasonable costs.

Several of the popular Curtis designs are exact copies of prized woodwork, now treasured in such institutions as the American Museum of Art in New York City. Yet, Curtis quantity production brings them within your reach. All are very reasonably priced.

•14•

(Far Right) China Case C-6511. Fine for small homes.

STAIRS ARE IMPORTANT

Strength Essential . . . Good Design Necessary

• Several architectural designs—English, Colonial, Early American—may be assembled from standard Curtis stair parts. Curtis Stairs, when properly built, can be adequate in strength, yet slender and graceful in design.

Curtis Stairwork, like all Curtis Woodwork, carries the Curtis trade-mark—that's your guarantee of sturdiness and beauty. See your dealer's complete catalog for stair information and pictures.

Curtis Stairwork Adds Beauty and Distinction to the Home

You can get just the right stairway for your home from Curtis. The stairway is the largest and most important piece of woodwork in any two-story house. Select one that will stand hard usage for many years.

Curtis builds strong and durable stairs that are quickly and economically installed. These standard stair parts come in several woods. Let your Curtis dealer help you.

Colonial stairway assembled from Curtis Standard Stair Parts.

IT PAYS TO BUY CURTIS WOODWORK

• Of the many things that enter into the construction of a home, nothing is of greater importance than the woodwork. That is why leading architects and builders place so much stress upon the selection of woodwork of good architectural design—and woodwork that is well made by a reliable manufacturer. Curtis has made fine woodwork since 1866.

You will be entirely satisfied with Curtis Woodwork. And one never tires of really beautiful woodwork, for it "makes" the house—outside and inside. The designs pictured here are typical of the beauty and fine craftsmanship found in all Curtis Woodwork. The money you put into Curtis Woodwork will prove a lifetime investment in economy and satisfaction for the whole family.

A smart, modern medicine chest with three adjustable glass shelves. C-6927. Mirror is 16" x 20". See other designs in Curtis Catalog.

This Curtis Telephone Cabinet is easily installed in any wall. It is design C-6914. Modern and convenient. Curtis has other designs, too.

A KITCHEN PLANNING

Recipe

with over 50,000 TRIUMPHS

• You just can't find better kitchen advice than that which Curtis can give you. For Curtis has planned over 50,000 kitchens for "Mrs. America" to help her save time, steps and money.

Curtis was among the first to see that efficient kitchens were a boon to housekeeping—to know that housewives would appreciate sound kitchen planning. And years ago, Curtis began to plan kitchens scientifically.

Since then, our experience with thousands of housewives, with home economics teachers and with decorators, has added to our experience in knowing what kitchens mean. Now the Curtis Kitchen Planning Service is known from coast to coast.

**YOUR CURTIS DEALER
HELPS YOU**

• There's a Curtis Dealer near you. He'll help you plan your kitchen the way you want it. Use this valuable service to save money and to get an efficient kitchen, whether you are building or remodeling.

The illustrations on these pages are examples of the kind of kitchens Curtis plans for "Mrs. America." You can have yours "as you like it." Remember, there's no charge for the help that Curtis can give you in developing a kitchen plan to satisfy your own requirements. Your first step is to see your dealer—or write Curtis.

We have used this kitchen experience to plan sectional kitchen cabinets which provide maximum storage space and convenience; and these cabinets are noteworthy in that they make modern kitchens possible at remarkably low cost. Your Curtis dealer will give you a copy of the big, new, colorful Curtis kitchen planning book—or write for your copy.

Select Your Own Color Scheme

● An outstanding advantage of having Curtis help you plan your kitchen is the free way in which you may employ color.

Curtis Sectional Kitchen Cabinets come packed in dust-proof cartons—unpainted. They are ready to put in place and ready to decorate. You may select exactly the color scheme you want. Your own individual ideas have free reign—you don't have to take factory-applied colors which may not entirely suit you. So a spot of color here, a decoration there, a combination of smart colors to match your personality is one big advantage Curtis units offer you. When you select Curtis Kitchen Cabinets, you get the most modern, most durable, most sanitary cabinet units that science knows how to make. They are *Wood* for lasting satisfaction—and for economy. They are furnished with or without hardware.

Good Housekeeping Institute approves Curtis Cabinets. That means that your satisfaction is assured. Look for the Curtis name on your cabinets.

Note how Curtis Cabinets "turn a corner."

A Curtis linoleum counter top will complete your Curtis kitchen. These tops may be had in a wide selection of colors—any length or shape. Curtis does not furnish sink—just the cabinets, top and grille doors. Any counter top material may be used with Curtis Cabinets.

Very practical.

Curtis tray case—ideal
for trays, flat pans, etc.

Space under sink unit provides practical
storage room for large utensils.

DON'T PRACTICE FALSE ECONOMY

● Beware of inferior kitchen cabinets, built by unskilled labor. Don't make the mistake of skimping on a few dollars for the equipment in your kitchen. Misplaced economy is wasted money. Disappointment in your kitchen equipment may make you dissatisfied with your entire home.

Curtis Sectional Kitchen Cabinets should not be compared with ordinary factory-made cabinets nor with the usual carpenter-built cupboards.

Each Curtis unit is built like a piece of fine furniture. Your guarantee of lasting satisfaction is the Curtis reputation for good woodwork—74 years' experience making really fine woodwork.

Whether the family consists of ten or two—regardless of the refrigerator selected—whether the range is gas, electric, wood or coal—Curtis Cabinets will bring to your kitchen just the kind of well-organized cupboard space you require, arranged as you want it.

CURTIS CABINETS for other parts of the House—BUILT LIKE FINE FURNITURE

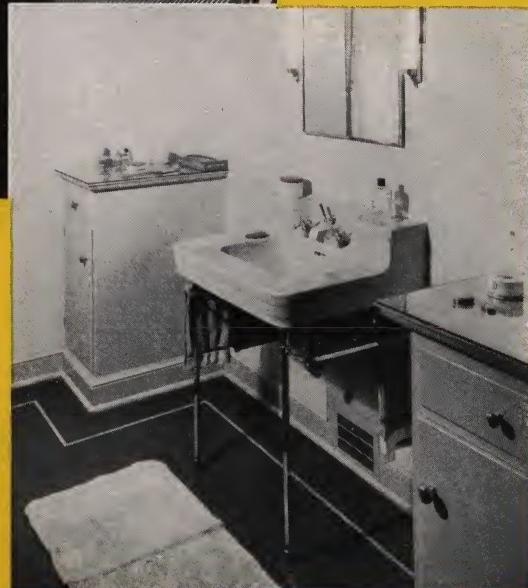

● In the Curtis line of sectional cabinets there is a unit for every purpose and a size for every kitchen. In addition, there are other uses around the house for standard Curtis Cabinet units. Homeowners who use Curtis Cabinets this way save the cost of special job-built units and get permanent furniture of the finest quality. Curtis Cabinets are wood—for no other material on the market surpasses wood for cabinet-work—for durability, workability and adaptability to paint, and for general lifetime satisfaction. Many wood homes built by the early Colonists stand in good repair today, defying centuries of time. No better testimonial to wood could be desired.

Attractive linen cases may be built up from the Curtis Sectional Cabinets. As each unit is complete with back and sides, no dust can enter. For this same reason, it is possible to build the cabinets into the wall as shown on the left, or to set them out in the room or in a corner as illustrated on the right. The latter method is most practical in remodeling jobs.

A recent "Bride's House" as planned and presented by House Beautiful magazine shows this assembly of Curtis Cabinets in the sewing room. They are ideal for storage—roomy, well made, good looking.

Units to each side of the lavatory furnish much needed storage space for articles used in the bathroom. These are standard Curtis units. Glass tops have been placed on them.

THERE ARE MANY USES FOR CURTIS CABINETS

● While designed primarily as kitchen cabinets, Curtis sectional units are used wherever storage space is needed. Here is a list of some of the many uses to which they have been put.

Home Use

- Kitchen Units
- Towel Cases
- Linen Cases
- Chest of Drawers
- Bookcases
